Unanimous AI Awarded New Patent for Swarm AI® Technology

Latest Patent is Related to the use of Swarm AI Technology on Mobile Devices

SAN FRANCISCO, JUNE 3RD, 2019

Unanimous AI, pioneers of Swarm AI technology, announced today that it has recently been awarded an additional patent for its innovations in amplifying the intelligence of networked human groups. The new patent is related to Swarm AI technology for use on mobile devices:

> US Patent **10,310,802**: System and Method for Moderating Real-Time Closed-Loop Collaborative Decisions on Mobile Devices

The newly issued patent covers a range of inventive methods and systems for amplifying the intelligence of networked human groups by forming real-time emergent systems on mobile systems. Published research studies have shown that by forming such systems, networked groups generate significantly more accurate decisions, forecasts, and assessments than traditional methods.

For example, in a study published earlier this year in collaboration with Stanford University small groups of doctors connected online using Swarm AI technology were able to reduce their diagnostic errors by over 30%. In another recent study, published in collaboration with California State University (CalPoly), small business teams connected online by Swarm AI increased their performance by over 20% on a standard intelligence test. Numerous other studies have shown similarly impressive results.

"At Unanimous, our mission is to amplify the intelligence of networked human groups," said Dr. Louis Rosenberg, CEO of Unanimous AI, "turning their combined knowledge, wisdom, and intuition into optimized forecasts, insights, and assessments that demonstrate significantly amplified accuracy."

A combination of real-time human insights and AI algorithms, Swarm AI technology from Unanimous turns networked teams into super-intelligent systems inspired by the way birds flock, fish school, and bees swarm. The technology is now available to all business teams through the newly released SaaS platform from Unanimous AI called Swarm®. The Swarm platform enables any business team to quickly harness their combined brainpower and converge in real-time upon AI-optimized solutions.

About Unanimous AI
Unanimous AI's Swarm® platform is the world's first software platform for amplifying the intelligence of business teams. The Swarm platform and Swarm AI technology from Unanimous was recognized as SXSW's 2018 "Artificial Intelligence Innovation of the Year." Unanimous AI has received funding from the National Science Foundation (NSF) to advance its hybrid human-AI technologies. #NSFFUNDED
